Hi Julia,

I am trying to determine the Strahler stream order for Sonoita Creek at Sonoita Creek Ranch, and for Barrell, Wasp, and Davidson Canyons. Does Pima County or another source have this information readily available?

Thanks,

Rob

No conclusions can be drawn re Sonoita Ck based on the Eastoe study. Dr. Tom Meixner is working with a team of folks on surface water studies involving the SCR watershed, including that part of the basin—he might have some information. Dr. Eylon Shamir is working on the upper SCR groundwater /surface water situation—he might be even better at answering your question.

Julia,

Based on the attached groundwater study, do you have a sense of what conclusions one can make as to the relative contribution of surface/groundwater originating within the area of Sonoita Creek Ranch to the Tucson aquifer?

Thanks,

Rob

Elizabeth mentioned your interest in documentation of the connection of the Cienega Creek to our water supply.
